OF
AEROSPACE ENGINEERING
BE/BS
ME/MS
(Revised 2012)
HIGHER EDUCATION COMMISSION
ISLAMABAD
CURRICULUM DIVISION, HEC

Prof. Dr. Syed Sohail H. Naqvi          Executive Director
Mr. Muhammad Javed Khan                Adviser (Academic)
Malik Arshad Mahmood                   Director (Curri)
Dr. M. Tahir Ali Shah                 Deputy Director (Curri)
Mr. Farrukh Raza                      Asst. Director (Curri)
Mr. Abdul Fatah Bhatti                Asst. Director (Curri)

Composed by: Mr. Zulfiqar Ali, HEC, Islamabad
## CONTENTS

1. Introduction 6
2. Framework for 4-year in BE/BS in Aerospace Engineering 14
3. Proposed Model BS/BE Aerospace Engineering Programme 17
4. Details of Courses for BE/BS Aerospace Engg. 19
5. Scheme of Studies for ME/MS Leading to PhD Aerospace Engineering 37
6. Details of Courses ME/MS Leading to PhD Aerospace Engineering 40
7. Recommendations 52
8. Annexure A to F (Compulsory Courses for Engineering Discipline). 54
PREFACE

The curriculum of subject is described as a throbbing pulse of a nation. By viewing curriculum one can judge the stage of development and its pace of socio-economic development of a nation. With the advent of new technology, the world has turned into a global village. In view of tremendous research taking place world over new ideas and information pours in like of a stream of fresh water, making it imperative to update the curricula after regular intervals, for introducing latest development and innovation in the relevant field of knowledge.

In exercise of the powers conferred under Section 3 Sub-Section 2 (ii) of Act of Parliament No. X of 1976 titled “Supervision of Curricula and Textbooks and Maintenance of Standard of Education” the erstwhile University Grants Commission was designated as competent authority to develop review and revise curricula beyond Class-XII. With the repeal of UGC Act, the same function was assigned to the Higher Education Commission under its Ordinance of 2002 Section 10 Sub-Section 1 (v).

In compliance with the above provisions, the HEC undertakes revamping and refurbishing of curricula after regular intervals in a democratic manner involving universities/DAIs, research and development institutions and local Chamber of Commerce and Industry. The intellectual inputs by expatriate Pakistanis working in universities and R&D institutions of technically advanced countries are also invited to contribute and their views are incorporated where considered appropriate by the National Curriculum Revision Committee (NCRC).

A committee of experts comprising of conveners from the National Curriculum Revision of HEC in Basic, Applied Social Sciences and Engineering disciplines met in April 2007 and developed a unified template to standardize degree programmes in the country to bring the national curriculum at par with international standards, and to fulfil the needs of the local industries. It also aimed to give a basic, broad based knowledge to the students to ensure the quality of education. The BS degree shall be of 4 years duration, and will require the completion of 130-136 credit hours.

In line with above, NCRC comprising senior university faculty and experts from various stakeholders and the respective accreditation councils has finalized the curriculum for Aerospace Engineering. The same is being recommended for adoption by the universities/DAIs channelizing through relevant statutory bodies of the universities.

MUHAMMAD JAVED KHAN
Adviser (Academics)

INTRODUCTION

A three-day final meeting of the National Curriculum Revision Committee for the Aerospace Engineering (NCRC-Aerospace Engineering) was held from 16-18 January, 2012 to finalize the curricula for both the BE/BS and ME/MS Degree Programmes; drafted during an earlier meeting of the committee, held from September 12 to 14, 2011 at Higher Education Commission, Regional Centre, Karachi. The objective of the final meeting was to finalize and consolidate the curricula for Aerospace Engineering.

The NCRC (Aerospace Engineering) comprised of the following committee members from academic and industry:-

1. Prof. Dr. Khalid Parvez, Convener
   Professor at RCMS
   National University of Sciences & Technology, (NUST), Rawalpindi.

2. Brigadier Dr. Atiq-ur-Rehman, Member
   Professor
   Dept. of Aeronautics & Astronautics,
   Institute of Space Technology,
   Islamabad.

3. Air Commodore Dr. Abdul Munem Khan, Member
   Professor & Dean
   College of Aeronautical Engineering
   PAF Academy, Risalpur.

4. Prof. Dr. Salim ur Rahman, Member
   Vice Chancellor,
   Sarhad University of Science & Information Technology,
   LandiAkhun Ahmad, Ring Road,
   Peshawar.

5. Group Captain Dr. Abid Ali Khan, Member
   Prof. & Head of Aerospace Department
   College of Aeronautical Engineering
   PAF Academy, Risalpur.

6. Dr. Muhammad Kashif Khan, Member
   Manager,
   Mechanical and Space Engineering, Structures Lab.,
   Systems Engineering and Design Division,
   SUPARCO, Karachi.

7. Dr. Muhammad Ayub Khan Yousafzai, Member
   Chairman
   Dept. of Applied Physics,
   Visiting Prof:
   Institute of Space Science & Planetary Atmosphere,
   University of Karachi, Karachi.
Meeting started with the recitation from the Holy Quran by Dr. Muhammad Tahir Ali Shah, Deputy Director (Curriculum), HEC, Islamabad.

Mr. Muhammad Javed Khan, Adviser (Academics) HEC, inaugurated the meeting and welcomed the participants on behalf of the Chairman, Higher Education Commission. He briefed the members of the committee about the obligation of HEC for curriculum review/revision at graduate and post graduate level. He thanked the committee members for their participation in this very important National task of upgradation/revision of the curriculum in Aerospace Engineering. He informed the members about the procedure for the review & revision and development of curricula. He also suggested that the HEC shall be requesting the Vice-Chancellors of the Universities to implement the Advance Courses suggested by the Committee in their institutions where the facilities and faculty exists. He also emphasized that the programme shall be developed as model for the students of Aerospace Engineering to gain maximum knowledge and same shall be compatible with International programs foreign universities of high repute and shall cater the National needs and requirements.

Dr. M. Tahir Ali Shah apprised the participants about the standardized format for development of curricula in the Engineering disciplines and requested the members of NCRC to review/revise the existing curriculum in Aerospace Engineering to make it more job oriented; to match the needs of the students and all stakeholders in the country. He informed that draft curriculum developed in the preliminary NCRC meeting was circulated to the local as well as expatriate Pakistani experts for critical evaluation/comments and suggestions to make the program at par with international standards.

The participants agreed to retain Prof. Dr. Khalid Parvez, National University of Sciences & Technology, Islamabad as the Convener and appoint Dr. Salimuddin Zahir, Chief Manager, Centre for Fluid Dynamics;
NESCOM, Islamabad as the Secretary of the NCRC-Aerospace Engineering.

Professor Dr. Khalid Parvez, Convener of the Committee, thanked HEC for their efforts and the following universities/organizations for sending their representatives, for contributing in the significantly important, national task.

1. Research Centre for Modelling and Simulation, NUST, Islamabad
2. College of Aeronautical Engineering, NUST, PAF Academy, Risalpur
3. Institute of Space Technology, Islamabad
4. NESCOM, Islamabad
5. University of Karachi
6. SUPARCO, Karachi
7. Sarhad University of Science & Information Technology, Peshawar
8. Federal Urdu University of Arts, Sciences and Technology, Karachi
9. Air University, Islamabad

Item No.1 Vision, Objectives and Outcomes of Aerospace Engineering Education

Prof. Dr. Khalid Parvez proposed to develop a clear vision of Aerospace Engineering Programme to inspire and guide the task of curriculum development and define the scope of Aerospace Engineering in Pakistan. He stated that these disciplines involve the application of Engineering concepts, techniques, and methods to the development of airborne systems. An Aerospace engineering programme should develop professionals who have a mastery of the respective system development principles, theory, practice, and process.

Prof. Dr. Khalid Parvez said that Aerospace Engineering, like other engineering disciplines, must lay an emphasis on issues of process, design, measurement, analysis and verification providing a strong foundation in engineering principles and practices as applied to the aerospace systems development.

The Committee held detailed and extensive deliberation on the BE/BS and ME/MS curricula. It was noted that the rapidly emerging and developing area of Aerospace Engineering faces uphill challenges and newer exciting opportunities. The Committee agreed that the proposed curricula should be geared towards exploring the subject at theoretical, practical, and application levels. It must address the need to establish concepts, knowledge and practical experience in all aspects of Aerospace Engineering design cycle requirements. The programme shall also include problem analysis, design, construction, test-design and evaluation, maintenance and project planning and control aspects.

The Committee came up with the following Vision Statement, Objectives and Outcomes for the Aerospace Engineering education in Pakistan:
VISION

The Aerospace Engineering Education in Pakistan focuses on imparting the Aerospace Engineering knowledge to a level that the students are successful in their professional careers, including industry, government service, and academia. The programme will prepare the students for amicable application of engineering principles, processes and practices to aerospace systems, and their maintenance. The students after graduation will contribute to the creation of useful new products, or the generation of original research, by analyzing and implementing solutions to relevant problems in the component disciplines of Aerospace Engineering. The students will contribute effectively when part of an integrated team, effectively communicating with team members, supervisors, and clients.

The Aerospace Engineering programme will also, in addition to students’ professional growth, attend to development of their personal and interpersonal skills. It will help students to enhance their ability in oral and written communication, and their adaptability to group-work environments. The programme will inculcate among students a strong sense of civic, professional and ethical responsibility. The programme will strive to develop a capacity for innovation and a passion for lifelong learning.

OBJECTIVES

The following Aerospace Degree programme objectives are envisaged to be accomplished through a rigorous curriculum that emphasizes fundamentals in basic sciences, mathematics, and the humanities & integrates classroom and laboratory experiences in the engineering disciplines of aerodynamics, propulsion, structural mechanics, mechanics of material, aerospace vehicle design & control, computational engineering, measurements & instrumentation, design & technical communications:

- Provide the highest quality education in state-of-the-art aerospace engineering principles and practices at undergraduate and advanced degree levels.

- To prepare students for professional practice in aerospace engineering and related engineering & scientific fields.

- Conduct research that will significantly advance the state of knowledge in the aerospace sciences and technologies.

- To prepare students for post-baccalaureate education as their aptitude and professional goals may dictate.

- To provide students with an awareness of the effects of technology in a contemporary global and societal context.
• Advance aerospace engineering practice and education through publications in the engineering and educational literature and through close relations with industry, government and other academia.

OUTCOMES

Graduates of the Aerospace Engineering Programme should possess the ability:

• to apply knowledge of Aerospace Engineering.
• to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
• to identify, formulate, and solve engineering problems.
• to function on multidisciplinary teams.
• to clearly understand the professional and ethical responsibility, and ability to communicate effectively.
• to recognize the need for, and an ability to engage in life-long learning of Aerospace Engineering issues.
• to design and conduct experiments, as well as to analyze and interpret data.

The meeting expressed confidence that the curricula developed will reflect the spirit as contained in the Vision Statement and when implemented, this will satisfy the professional demands of the industry and academia. The graduates produced will be adequately equipped to exploit the opportunities and respond to the challenges offered by the faster pace of modern developments.

Item No.2 Knowledge Areas of Aerospace Engineering Curriculum Development

The Chair expressed the need to approach the curriculum development systematically by identifying the major knowledge areas of Aerospace Engineering education.

The following major areas are considered appropriate to design the curricula of Aerospace Engineering:

1. Non-Engineering
   a. Humanities (English, Culture, Social Sciences)
   b. Management Sciences
   c. Natural Sciences (Mathematics, Physics, Chemistry)
2. **Engineering**
   a. Computing (Fundamentals, Programming, Design)
   b. Engineering Foundation
   c. Major Based Core Depth and Breadth (Space Sciences, Aerodynamics, Thermodynamics, Structures, Mechanics)
   d. Inter-disciplinary electives

The Committee discussed and deliberated in detail, various international recommendations and standards presented to the participants, related to undergraduate and graduate programmes. The committee recognized that good curricula should focus on building a solid foundation in the early stages of learning and gradually introducing and strengthening the core professional competencies and desired skill-sets. The major technical subject contents should be covered during the second, third and fourth years. Laboratory component should inculcate an industrious approach and practice towards problem solving among students. Good engineering practices must be nurtured all along the education programme. As the practice of Aerospace Engineering is often in the context of multi-application domains, therefore, the graduates should be provided an opportunity of reasonably broad exposure to learn and demonstrate the application of engineering practices. The final year design project should provide the opportunity to bring together all the knowledge gained in a wide variety of courses to solve real-life problems.

**Item No.3 Duration of Programmes**

The BE/BS Aerospace Engineering Degree Programmes would be minimum 4-year programme spread over 8 semesters. While, MS/ME Aerospace Engineering Degree Programmes would be of minimum 1½ years.

**Item No.4 Eligibility and Admission Criteria**

The eligibility criteria for BE/BS Aerospace Engineering was discussed. It was proposed that candidates should have an intermediate with physics, mathematics and chemistry or equivalent qualifications with at least 60% marks (requirement of PEC); however, universities may define their own admission criteria.

The eligibility criterion for admission to ME/MS Aerospace Engineering was agreed to be BE/BS Engineering or 16 years of education in a relevant field. Admission criterion is to be decided by the institutes themselves in the light of the guidelines provided by HEC.

**Item No.5 BE/BS Programme Structure**

All participants agreed that the proposed programme in Aerospace Engineering meets the needs of learning outcomes in terms of knowledge outcomes and ability outcomes with relevant skills. The development of curricula is expected to enhance the theoretical and practical understanding in the field of Aerospace Engineering.
Minimum credit hours earned by a student shall be 130 for the award of BE/BS degree in Aerospace Engineering. Overall distribution must conform to the criteria laid down by HEC and PEC.

Item No.6 ME/ MS Aerospace Engineering-Programme Structure

The ME/MS Aerospace Engineering programme was also reviewed thoroughly. It was agreed by the committee that for ME/MS minimum credit hours earned by a student shall be 30 as per following distribution:

<table>
<thead>
<tr>
<th>Component</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mandatory Courses</td>
<td>15</td>
</tr>
<tr>
<td>Electives *</td>
<td>09</td>
</tr>
<tr>
<td>Thesis</td>
<td>06</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>30</strong></td>
</tr>
</tbody>
</table>

* One of the electives should preferably be from Mathematics

Item No.7 Objectives of ME/MS Aerospace Engineering

The objectives of MS/ME Aerospace Engineering programme shall be to produce graduates, who:

1. Are highly valued and technically sound professionals, well prepared for their subsequent assignments, duties and responsibilities as professional aerospace engineers, in public as well as private sector organizations.

2. Have been provided core education in this programme.

3. Possess detailed understanding in at least one specialty area.

4. Can apply foundational scientific concepts and sound engineering principles efficiently and effectively starting from conceptual design till final deliverables, utilizing advanced technological capabilities in the country.

5. Have experience in conducting independent analytical/numerical/ experimental research work and document it with fact finding approaches.

6. Can professionally support and communicate technical solutions and results.

7. Continue to pursue lifelong multidisciplinary learning and aim high as professional engineers.

Contents and descriptions of courses to facilitate accomplishment of the programme objectives were deliberated in light of the ME/MS
Aerospace Engineering programme and it was agreed that the scope of the ME/MS Programme shall be augmented and be renamed as ME/MS Leading to PhD. In support, the committee also resolved that imparting of professional training, through industrial experts’ lectures or short courses be welcomed. Further, it was recommended that the elective courses taught by the institutions should preferably include one Maths course.

**Item No.8 Conclusion**

Finally, Dr. M. Tahir Ali Shah, Deputy Director HEC, thanked all the participants for their valuable contribution to this national cause. Dr. Khalid Parvez, the Convener also thanked the participants for their willing and useful contributions, especially participation from the industry. He said that their efforts will go a long way in developing a workable, useful and comprehensive degree program in Aerospace Engineering. He said that the entire exercise has not only been utilized by the HEC for developing Aerospace Engineering degree programme, but it also provides an opportunity to professionals and faculty from all around the country to interact for mutual benefit in professional development. He also expressed his profound gratitude to the HEC for providing an opportunity to professionals and academicians from all over the country to contribute their time, knowledge, expertise, and experience to this important activity.

The meeting concluded with vote of thanks to all participants, members and the Chair.
FRAME WORK FOR BE/BS
AEROSPACE ENGINEERING

Duration: 4 years
Number of semesters: 8
Number of weeks per semester: 16-18
(16 for teaching and 2 for examinations)
Total number of credit hours: 130-136
Number of credit hours per semester: 15-18
Engineering Courses: 65-70 %
Non-Engineering Courses: 30-35 %

The curriculum design is based on the concept of foundation, breadth and depth courses so that streams for different specializations can be created within each discipline.

**Foundation Courses:** The foundation courses are the courses that all students in a given discipline of engineering must take. These courses provide students with the fundamental concepts and tools to pursue their studies at the higher level.

**Breadth Courses:** The breadth courses introduce students to different specialties in the given discipline of engineering early in their studies. Before taking the breadth courses, the students should be advised that their choices will affect taking follow-up courses because of pre-requisite requirement.

**Depth Courses:** The depth courses offer specialization within each
All depth courses must integrate a substantial design component. The students may select electives from any of the areas of specialization with some guidelines from the respective advisors.

## Total Credit Hours

### Lec: Lecture, CR: Credit Hours

1. **Number of credit hours per semester**: 15-18
2. It is up to the individual universities to determine the locations of breadth and depth courses in various semesters.
3. Universities may prepare their own semester-wise programme.
4. **Total Credit Hours** can be varied between 130 and 136 (both inclusive)
5. Subject credit hours and lab component may also be adjusted according to the subject need and institution’s program
6. The Lab Credit Hours may be commensurate with the number of lab experiments in the course. However, the lab credit hours should not be less than 0.5.
7. List of electives is placed as Annex E.
DETAILS OF COURSES
FOR BE/BS AEROSPACE ENGINEERING

Mathematics

Title of the Course: **Math-I : Applied Algebra and Calculus**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Specific Objectives of Course:**
To provide comprehensive foundation of applied algebra and calculus with emphasis on vectors, complex numbers, matrices, limits, differentiation, integration, and coordinate systems.

**Course Outline:**
Complex numbers and De Moivre's theorem, determinants, matrices, product, inversion, rank, system of equations and Cramer's rule, synthetic division, remainder and factor theorem, roots of polynomial equations, graphical method and transcendental equations. Limit, continuity and differentiation involving algebraic, trigonometric, hyperbolic, implicit and composite functions; application to rates and small corrections, simple Cartesian, parametric and polar curves; tangent, normal, maxima and minima, Taylor and Maclaurin series; curvature. Integration as inverse of differentiation, by substitution, by parts and partial fraction; definite integrals (Wallis formula); integral as limit for a sum, area and arc length of plane figures, volumes and surfaces of solids of revolution.

**Lab Outline:** Nil

**Recommended Books:**
- Integrated Algebra and Trigonometry by Fisher and Zeibur.
- Calculus and Analytic Geometry by Thomas 9th Ed. 2007.
- College Algebra by Rees and Sparks.
- Practical Mathematics Vol I & II by Toft and Meckay.
- Unified Calculus and Analytic Geometry by Rainville.
- Vector analysis by Schaum series
- Basic Technical mathematics with Calculus by Peter Kuhfitting
- Linear Algebra and its Applications by David C Lay.
Title of the Course: **Math - II : Advanced Calculus & Transform**

**Credit Hours:** 3-0

**Prerequisites:** Math - I (Applied Algebra and Calculus)

**Specific Objectives of course:**
To provide comprehensive knowledge of basic principles, methods, and clear perception of advanced calculus used extensively in nearly all the engineering fields especially in Mechanics, Structures, Communications and Electronics.

**Course Outline:**

**Analytic Solid Geometry** [Equation of a line in symmetrical form, angle between two lines; Angle between two planes. Distance from a point to a plane; Distance from a point to a line. Coordinates of a point dividing a given line in a given ratio; General form reduced to normal, to find the equation of a plane passing through three points or by any set of three independent conditions; Normal form of an equation of a plane, general form of an equation of a plane; Parallel, intersecting and skew lines. The distance between two parallel planes; Shortest distance between two lines (Skew or parallel); Definition of surfaces; Spherical & Cylindrical Coordinates. Direction ratio’s],  

**Partial Differentiation** [Function of several independent variables; Partial derivatives. Geometrical interpretation of partial derivatives; Equation of a tangent plane and normal line; Total Differentiation. The derivative of composite function; Partial derivative of higher order and problems; Taylors theorem for function of two variables; Maxima and minima of functions of two variables],  

**Infinite series** [Introduction to infinite series; Convergence by comparison test and P-series; Absolute convergence and conditional convergence; Integral test and root tests; Ratio test and power series; domain of convergence],  

**Multiple Integration** [Definition of double integration. Evaluate the double integral with the order of integration reversed; Using double integration find plane area in Cartesian, polar coordinates. (a) Centre of gravity of a plane figure. (b) Moment of inertia of a plane lamina; Volume and surface areas in Cartesian, cylindrical and spherical coordinate systems; Centre of gravity of volume using Cartesian, cylindrical and spherical coordinates; Moment of inertia of volume, surface area; Ratio test and power series; domain of convergence],  

**Fourier Series** [Introduction to Fourier Series; To evaluate Fourier Constants and write down Fourier expansions; Even and odd functions and their Fourier expansions; Half range Fourier Series; Complex Fourier Series; Fourier Integrals].

**Lab Outline:** Nil

**Recommended Books:**
- Calculus and Analytic Geometry by Thomas
- Advanced Engineering Mathematics by Kreyszig
- Analytic Geometry and Calculus with Vectors by Agnew
- Practical Mathematics Vol-I & II by Toft & McKay
Title of the Course: **Math - III : Differential Equations**

**Credit Hours:** 3-0

**Prerequisites:** Math - II (Advanced Calculus & Transforms)

**Specific Objectives of course:**
To provide detailed knowledge of basic principles, methods, and clear perception of ordinary differential equations and partial differential equations used in engineering fields especially in Mechanics, Dynamics, Structures, Communications and Electronics.

**Course Outline:**
**First Order Ordinary Differential Equation** [Introduction to differential equation, Solution by separation of variables, Differential equations with homogeneous coefficient, Reducible to homogeneous form, Exact differential equations, Linear differential equations of order one, Solution using exact differentials, Bernoulli’s differential equations, Applications of 1st order Ordinary Differential Equations, Orthogonal trajectories, Introduction to Mathematical Modelling]; **High Order Differential Equations with Constant Coefficients** [Solution of homogeneous differential equations, Non homogeneous ordinary differential equations, Method of undetermined coefficients, Cases of failure in method of undetermined coefficients, Method of variation of parameters, Cauchy Euler Equation, Solutions of System of linear ordinary differential equations by operator method, Power series method, Solutions about Singular points using the method of Frobenius, Applications of higher order ODEs]; **Partial Differential Equations** [Basic concept of partial differential equations, solution of PDE and Fundamental Theorem, Solution of homogeneous LPDE by operator method, Method of separating variables (Product Method). Solution of first order, 2nd and higher order LPDE by Product method and examples Boundary value problems with boundary initial conditions, Derivation of one-dimensional wave equation and its solution, Derivation of one-dimensional heat equation and its solution, Heat equation with special cases when initial velocity = 0 and initial displacement ≠ 0 and vice-versa, D’Alembert’s solution of wave equation].

**Lab Outline:** Nil

**Recommended Books:**
- Advanced Engineering Mathematics by Kreyszig
- Advanced Engineering Mathematics by Zill & Cullen
- Practical Mathematics Vol-I & II by Toft & McKay
- Introduction to Ordinary Differential Equations by Ross
Title of the Course: **General Physics**

**Credit Hours:** 3-1  
**Prerequisites:** Nil  

**Course Outline:**  
The course includes dimensional analysis, experimental errors; force and torque, general conditions of equilibrium work, energy and power angular motion and moment of inertia. Electric field intensity, current and resistance; Kirchhoff's laws for electrical circuits, electromagnetism, thermoelectricity are also covered in this course. Simple Harmonic Motion (SHM), composition of SHM, Damped SHM, Lissajous figures, beats, Doppler effect, loudness and intensity and fundamental concepts in geometrical optics, wave theories of light, dual nature of radiation and matter, interference, diffraction, polarization, double refraction and its application to optical stress analysis also form part of this course.

**Recommended Books:**  
- University Physics by Roger A Freedman, 8th Edition  

Title of the Course: **Introduction to Aerospace Engineering**

**Credit Hours:** 2-0  
**Prerequisites:** Nil  

**Course Outline:**  
This is an introductory course of Aerospace Engineering aimed at giving practical understanding of aircraft and its systems to the engineering students. It encompasses the aspects of flight controls, aircraft construction, principles of jet reaction, flight instruments, and electrical systems. The course also gives the concepts of aeronautics and astronautics.  
Flight control studies deal with aerodynamics and aircraft control surfaces. Aircraft construction includes basic structure of aircraft, landing gears, hydraulic, pneumatic and fuel systems and also the maintenance inspections. The topic 'principle of jet reaction' includes thrust and power, factors effecting thrust, compressors and jet propulsion devices. The study of aircraft instruments includes flight, engine auxiliary instruments. The electrical system deals with power supply, power generation and electrical components. In addition to the text, a few videos and visits of aircraft
maintenance facilities are included to help understand course contents.

Recommended Books:
- Class notes

Journals / Periodicals:
- Aerospace America (AIAA)
- Aerospace Engineering (SAE)

Title of the course: Introduction to Computer Programming

Credit Hours: 2-1

Prerequisites: Nil

Specific Objective of the course:
To teach computer programming (C++ / Fortran / VB / C#)

Course Outline
Introduction to digital computers, main components and functions; elements of programming, flow charts, high level languages (C++ / Fortran / VB / C# etc); practical training in programming using any language.

Recommended Books:
- Object Oriented Programming in C++ by Robert Lafore, 3rd Edition
- C++: How to Programme by Deitel and Deitel, 3rd Edition

Title of the course: Computer Applications in Engineering Design

Credit Hours: 2-1

Prerequisites: Introduction to Computer Programming

Specific Objective of the course:
The objective of this course is to give students a ‘hand on’ experience of solving engineering problems (Stress Analysis, Modal Analysis, Buckling Analysis, Thermal Analyses, Fluid Flow Problems, etc) using a commercially available Computational analysis software (ANSYS) Fluent.

Course Outline
The course provides a student with insight to solid modeling features of the software being used. Students are to solve problems belonging to the structures and aerodynamics specialty.

Lab Outline:
Assignments are to be completed and submitted as per instructor's directive.

Recommended Books:
- Software manual
Title of the Course: **Mechanics of Materials**

**Credit Hours:** 3-1

**Prerequisites:** Engineering Mechanics - I (Statics)

**Specific Objectives of course:**
The students should be able to understand stress, strain stress-strain relation & behaviour of structures under different types of loading.

**Course Outline:**
Stress, strain, Hook’s law , statically determinate and indeterminate problems in axial and shear modes, shear force and bending moment diagrams, flexural and shear formula for beams, theory of torsion; thin walled pressure vessel.

**Recommended Books:**

Title of the Course: **Engineering Drawing**

**Credit Hours:** 0-1

**Prerequisites:** Knowledge of computer usage

**Specific Objectives of Course:**
This course consists of a series of lectures and classroom exercises designed for familiarizing the students with the basic concepts of Engineering Drawing. In addition, it is a course in Computer Aided Drafting (CAD), which covers the fundamentals of CAD. The course has been designed to provide students with a secure and sufficient background for understanding and using the computers to make 2-D and 3-D engineering drawings. It also prepares the students for more advanced uses of computers in CAD / CAM (computer aided manufacturing) operations.

**Course Outline:**
It includes a brief account of the various types of drawings with main emphasis on Orthographic Drawings which are the most widely used mode of technical communication. It includes detailed exercises on graphical geometry and then continues with progressive practice in making and understanding various types of orthographic drawings. The topics covered include Principle Views, Auxiliary Views and Sectional Views.
The students are introduced to the computer software to be used during the course, enabling the student to make 2-D drawings with the help of computers. For this purpose suitable CAD software such as Solid Edge / CATIA software is utilized. Students are familiarized with various 2-D
drawing commands including the dimensioning commands and advanced editing techniques and drafting of 3-D drawings on computers. Students are familiarized with various basic and advanced 3-D drawing commands for enabling them to draft any type of 3-D drawing on the computers in a perfect, precise and efficient manner.

Recommended Books:
- Class handouts
- Software manual and tutorials
- Fundamentals of Engineering Drawing by French & Vierck
- Engineering Drawing and Drafting by T.E. French, C. J. Vierck, and R. J. Foster.
- Elementary Engineering Drawing by N. D. Bhatt
- Electronic PCB Design software Tutorials

Title of the Course: **Thermodynamics**

Credit Hours: 3-0

Prerequisites: Math - II & Physics

Specific Objectives of Course:

To teach Thermodynamics Laws and their application to various systems & physical properties of pure substances.

Course Outline:
This is the first course in Engineering Thermodynamics. It provides essential background and competence to the students to have basic know how and analyzing ability of the fundamental concept, Zeroth law and First law of Thermodynamics and its applications to various systems and physical properties of pure substances. Use of property tables, P-V-T relations, Equations of state for ideal gases, second law and its consequences, reversible and irreversible processes and cycles, entropy and its use. Study of the subject course is the pre-requisite for more advanced courses on Engineering Thermodynamics and Propulsion etc.

Recommended Books:
- AP 3456A
Title of the Course: Heat Transfer

Credit Hours: 3-0

Prerequisites: Thermodynamics

Specific Objectives of course:
To enable the student to understand jet propulsion principles, vapour power cycles and fuel combustion reactions.

Course Outline:
This is the second course in Thermodynamics, which illustrates application of basic principles, covered in pre-requisite course, to various systems. It provides the student with essentials of the air standard power cycles including introduction to jet propulsion, the vapour power cycles in which the working fluid is alternately vaporized and condensed, the properties of atmospheric air (mixture of ideal gases and vapours) and air-conditioning processes and fuel combustion reactions for mass and energy balance.

Recommended Books:

Journals/Periodicals:
Journal of Thermodynamics & Heat Transfer
Journal of Propulsion & Power

Title of the Course: Incompressible Aerodynamics

Credit Hours: 3-1

Prerequisites: Math - II & General Physics. Knowledge of Aerospace Engineering

Specific Objectives of Course:
To study the basic concepts of fluid flow and to calculate forces and moments acting on solid object immersed in a fluid.

Course Outline:
The course deals with the incompressible fluid flows only, and comprises two major parts. The first part deals with the fluid statics and dynamics in which the fluid flows are analyzed and the mass flow rate, forces and energy flux are calculated. This part also deals with the potential flows and their super position. Part two consists of the dimensional analysis,
boundary layer theory and compares the ideal and real flows. This part mainly deals with airfoil characteristics, thin airfoil theory, high lift devices, wing characteristics, Prandtl’s lifting line theory and drag on the aircraft.

**Lab Outline:**
Experimental work on subsonic wind tunnel; wind tunnel calibration; model testing, data resolution; measurement of pressure distribution to calculate lift and drag.

**Recommended Books:**
- *Fundamentals of Aerodynamics* by John D Anderson
- *Fluid Mechanics* by Frank M White
- *Low speed wind tunnel testing* by Pope & Harper, John Wiley NY 1966
- “Fluid Mechanics” by Arthur G Hansen
- “Fluid Mechanics” by A J Theodore & R L Ditsworth
- “Airplane Aerodynamics” by Dommasch, Sherby, & Conolly
- “Principles of Ideal Fluid Aerodynamics” by K Karamcheti

**Journals / Periodicals:**
Fluid Mechanics

---

**Title of the Course: Compressible Aerodynamics**

**Credit Hours:** 3-0

**Prerequisites:** Thermodynamics, Incompressible Aerodynamics

**Specific Objectives of Course:**
To study the impact of density variation on the aerodynamics of a vehicle.

**Course Outline:**
In the first part wave propagation and speed of sound are covered followed by isentropic flow through variable area. Then flow through converging and converging-diverging nozzles and formation of normal shock waves and their application to wind tunnel and supersonic diffusers are discussed. Second part deals with oblique shock waves and Prandtl-Mayer flow and its application to supersonic airfoils. In the third part flows with friction and heat addition are discussed.

**Recommended Books:**
- *Dynamics & Thermodynamics of Compressible Flow* by A H Shapiro, Vol-1 and 2
- *Compressible Fluid Flow* by B W Imrie
- “Modern Compressible Flow” by Anderson, J. D.
- “Gas Dynamics” by Zucrow, M. J., & Hoffman J. D.
Title of the Course: **Aerospace Vehicle Performance**

**Credit Hours:** 3-0

**Prerequisites:** Compressible Aerodynamics

**Specific Objectives of Course:**
To Study the concept of flight mechanics of aircraft/ space vehicle considered as a point mass

**Course Outline:**
The course introduces basic performance characteristics. It begins with an introduction to standard atmosphere and aircraft/static system of an aircraft. The course then covers a steady-state analysis of performance parameters such as endurance, aircraft ceiling, range, climb, descent and glide, take-off and landing performance. Accelerated performance parameters are then evaluated using Energy State Approximation and results are compared with exact solutions. The last part of the course deals with turning performance both instantaneous and sustained.

Spacecraft: Flight mechanics and performance evaluation of a spacecraft may also be covered.

**Recommended Books:**
- Aircraft Design: A conceptual Approach by Daniel P Raymer
- Aircraft Performance Stability and Control by James D Lang
- Introduction to Flight by John D Anderson, Jr
- Understanding Flight by David F Anderson, Scott Eberhardt

**Journals/Periodicals:**
Aerospace Testing International

---

Title of the Course: **Stability & Control**

**Credit Hours:** 3-0

**Prerequisites:** Compressible Aerodynamics, Math - III (Differential Equations)

**Specific Objectives of Course:**
To study the stability and control of aerospace vehicle under a variety of external and internal inputs.

**Course Outline:**
This course gives a systematic account of stability and control of aerospace vehicle. In first part of the course, the static longitudinal, directional and lateral stability with respect to vehicle axis system are studied. Effects of various major components on static stability, critical flight conditions and controls requirement are also included in this part. In second part, dynamic stability, the axes system inertial and rotating axes and their transformations is studied. This part also gives treatment to
linearization of vehicle equations of motion, Laplace transform, stability derivatives, transfer functions, vehicle dynamic response to external disturbances and controls.

**Recommended Books:**
- *Automatic Control of Aircraft* by Blakelock, John Wiley, N.Y. 1965

**Title of the Course:** Aerospace Vehicle Design

**Credit Hours:** 1-2

**Prerequisites:** Stability & Control, Aero-Thermodynamics and Aero-vehicle Performance

**Specific Objectives of Course:**
To undertake conceptual design of an Aerospace vehicle

**Course Outline:**
This deals with the conceptual design of various types and categories of aerospace vehicle. It consists of two major activities: design layout and design analysis. These two phases broadly cover aspects involving configuration layout, pay-load considerations, aerodynamics, propulsion, structures and loads, weights, stability and control, performance and finally trade studies. As a part of this course, the student is required to prepare and present a conceptual design of a complete aerospace vehicle based on certain given specifications. Extensive use of computers would be made to refine the designed vehicle.

**Recommended Books:**
- “Fundamentals of Aircraft Design” by Leland M Nicolai

**Journals / Periodicals:**
Aerospace Testing International
Journal of Aircraft

**Title of the Course:** Engineering Mechanics-I (Statics)

**Credit Hours:** 3-0

**Prerequisites:** Math- I (Applied Algebra & Calculus)

**Specific Objectives of Course:**
To study the force and moments on rigid bodies in static equilibrium.
Course Outline:
This is the first course in Mechanics, which concerns the general principles of statics and the equilibrium of bodies under the action of forces. The main topics included in this course are types of forces, moments, couples and resultants; analysis of two and three-dimensional problems; and application of equilibrium principles to simple trusses, frames and machines. The course also covers special topics related to friction effects and fluid statics.

Recommended Books:
- *Engineering Mechanics* by Irving H Shames
- *Statics* by Beer and Johnston
- *Statics* by R C, Hibbler

Title of the Course:  
**Engineering Mechanics-II (Dynamics)**

Credit Hours: 3-0

Prerequisites: Engineering Mechanics - I (Statics)

Specific Objectives of Course:
To study the kinematics and kinetics of particles and rigid bodies using a variety of methods.

Course Outline:
The course has been divided into four parts. The first part, Kinematics of Particles, deals with a number of ways in which the motion of a particle is caused. Part two, Kinetics of Particles, is concerned with the three basic methods: force-mass-acceleration, work-energy, and impulse-momentum. In the third part, Kinematics of Rigid Bodies, the equations of relative velocity and relative acceleration are encountered. Emphasis is placed jointly on solution by vector geometry and solution by vector algebra. Part four, Kinetics of Rigid Bodies, covers the basic equations, which govern all categories of plane motion. Equation of motion in rotating frames.

Recommended Books:
- *Engineering Mechanics (Dynamics)* by R C Hibbler
- *Engineering Mechanics by Higdon and Stiles*
- *Dynamics by Beer & Johnston*
Title of the Course: **Material Science**

**Credit Hours:** 3-0

**Prerequisites:** Chemistry

**Specific Objectives of Course:**
To study the properties and applications of various materials used in aerospace industry.

**Course Outline:**
The course is designed to develop fundamentals of both conventional and advanced materials being used in engineering applications with special emphases on Aerospace applications. Course contents may include internal atomic structure, crystal structures and crystal systems in metals, structural imperfection, phase diagrams and their analysis, manufacturing processes of ferrous and non-ferrous materials and their mechanical properties, heat treatment, surface treatment and TTT diagrams. Introduction to polymers, polymer composites, type of fibres, metal matrix composites, ceramic matrix composites, inter metallic composites, powder metallurgy, conductors, magnetic materials and failure analysis of materials may also be included.

**Recommended Books:**
- Materials Science and Metallurgy, 4th Ed. by Herman W Pollack
- Introduction to Materials Science for Engineers, 4th Ed. by James F Shackelford

Title of the Course: **Aerospace Structure I**

**Credit Hours:** 3-0

**Prerequisites:** Engineering Mechanics - II (Dynamics), Mechanics of Material

**Specific Objectives of Course:**
The students should be able to understand the Finite Element concept in structures problems.

**Course Outline:**
This course deals with the structural theory that is common to all types of aerospace vehicles. The emphasis is upon fundamentals that are applicable to a broad class of structural problems. The first part of the course describes the load and temperature environment of the aerospace vehicles. This is followed by an introduction to ‘Theory of Elasticity’. The latter part of the course deals with the theories of bending, extension, torsion, and shear of slender beams without structural discontinuities.
These theories are useful in preliminary design and for determining the basic stress systems that are used in the analysis of statically indeterminate structures. The last part of the course introduces the deflection analysis of beams. A few labs are also included to help students in understanding fundamental concepts of the theory of structural analysis. These labs are designed to provide an opportunity to the students to measure strains on different types of structures and manipulate the acquired data to get different derived parameters from recorded strains. A few material testing experiments are also included.

**Recommended Books:**
- Aircraft Structures by Peery and Azar, 2nd Edition
- Theory and Analysis of Flight Structures by Robert M Rivello
- Aircraft Structures for Engineering Students by T H G Megson

**Title of the Course:** Structural Dynamics and Aero-Elasticity

**Credit Hours:** 3-0

**Prerequisites:** Incompressible Aerodynamics & Aerospace Structure - I

**Specific Objectives of Course:**
Objective of this course is to teach different types of vibrations and their effects in aerospace vehicles.

**Course Outline:**
The course covers Fundamentals of vibration, discrete and continuous systems, free and forced vibratory SDOF systems, harmonic vibration, rotating unbalance, base excitation, vibration isolation, transient vibration, systems with two degrees of freedom. The last part of the course introduces the subject of aero-elasticity.

**Recommended Books:**
- Mechanical Vibration by S. S. Rao
- Mechanical Vibration Theory & Application by Francis Stse & Rolland
- Aircraft Structures for Engineering Students by T H G Megson

**Journals/Periodicals:**
International Journal of Structure Stability & Dynamics
Structural Dynamics & Vibrations
Title of the Course: **Aerothermodynamics (Propulsion)**

**Credit Hours:** 2-1

**Prerequisites:** Heat Transfer and Compressible Aerodynamics

**Specific Objectives of Course:**
To teach details of propulsion units including breathing engines and rocket propulsion.

**Course Outline:**
The course mainly deals with air breathing engines which include ramjet, turbojet, turbo-fan, and turbo-prop. The course starts with the review of basic topics in thermodynamics, which predict the performance of propulsion devices. Next, the details of turbo engine components, especially compressor and turbine, and their matching are discussed. In the latter part of the course rocket propulsion and rocket propellants, liquid & Solid Rocket Propulsion Systems, nozzle design, rocket performance. Relevant experiments at appropriate levels are also conducted during the semester.

**Recommended Books:**
- "Mechanics and Thermodynamics of Propulsion" by Hill & Peterson
  2nd Ed, Pearson Publishing Company, 2009

**Journals / Periodicals:**
Journal of Propulsion & Power

Title of the Course: **Control Systems**

**Credit Hours:** 2-1

**Prerequisites:** Math-III

**Specific Objectives of Course:**
Objective of this course is to introduce fundamentals of control theory so that the students learn to model real life problems related to feedback control systems and find their solutions analytically.

**Course Outline:**
This course introduces the Aerospace majors to the fundamentals of linear control system. Initially the students are taught the mathematical modelling
of physical systems, which include both electrical and mechanical systems. The Digital computer is introduced as a tool for solution of differential equations and linear systems, transient and steady state response. Classification of control systems and frequency response of feedback control system are taught during the later part of the course. Root locus, Routh’s criterion and signal flow graphs are also covered.

**Recommended Books:**

- *Feedback Control Systems* by John, H Blakelock

**Journals / Periodicals:**

IEEE Control Systems Magazine

**Title of the Course:** Aerospace Instrumentation

**Credit Hours:** 2-1

**Prerequisites:** Physics

**Specific Objectives of Course:**

Main objective of this course is to introduce the students with the fundamentals of measurement techniques and instrumentation systems. So that they should be able to understand instrumentation systems that are being used in and for aerospace systems.

**Course Outline:**

Measurement and correct interpretation are necessary parts of any engineering research and development programme. Naturally, the measurements must supply reliable information and their meanings must be correctly comprehended and interpreted. This course is meant for students who have to deal with various types of test and measurement equipment at various stages of their life. It includes topics related to process of measurement standards and dimensional units of measurement, sensors, counters, displacement and dimensional measurements, and stress & strain measurement analysis, fluid flow measurement, temperature measurement and motion measurement. Experimental portion includes use of measuring instruments like autocollimator, screw pitch measuring machine, tolerator, horizontal metro scope, interference microscope, interferometer, surface roundness testing machine and Mechanical & Electronic comparators.

**Lab Outline:**

Besides formal lab work SPICE / MATLAB / LABVIEW based tutorial sessions can be scheduled for analysis and designing of analogue and digital instrumentation systems.
Recommended Books:

Title of the Course: **Probability And Statistics**

**Credit Hours:** 2-0

**Prerequisites:** Math – I

**Specific Objectives of course:**
To enable the students to effectively analyse scientific data using various statistical tools and techniques.

**Course Outline:**
Representation of statistical data, measures of central tendency, variation, skewness and Kurtosis. Fundamentals of probability, discrete and continuous probability distributions i.e. binomial, Poisson, negative exponential, normal and Weibull; Sampling distributions of mean and standard deviation; Chi-square and F distributions; testing of hypothesis. Linear correlation by moments and experimental verification of laws of statistics and probability

**Recommended Books:**

Title of the Course: **Numerical Methods**

**Credit Hours:** 2-1

**Prerequisites:** Introduction to Computer Programming

**Specific Objectives of course:**
To enable students to solve complex problems of sciences and engineering using modern computers using discrete mathematical concepts.

**Course Outline:**
Introduction to numerical methods; polynomial, transcendental and linear systems of equations; root finding, bisection methods, Newton’s methods, finite differences, interpolation, curve fitting, differentiation, integration and ordinary differential equations; errors of approximation. Practical training in application to scientific and engineering problems, introduction to Finite Element Method

**Lab Outline:**
Practice problems from sciences and engineering
Recommended Books:

- *Numerical Analysis by Burdene & Fairs*
- Fundamentals of Numerical Analysis by Stephen G. Kellison
- Introductory Computer Methods and Numerical Methods by Ralph H. Pennington
- A First Course in Numerical Analysis by Anthony Ralston
- Methods in Numerical Analysis by K. I. Nielsen

Title of the Course: Senior Design Project I & II

Credit Hours: 0-6 (To be covered in 7th & 8th Semester consecutively)

Prerequisites: Senior Standing

Specific Objectives of Course:
To do a complete project independently on any aerospace topic exhibiting ability of application of knowledge in all basic aerospace subjects.

Outline:
Students are required to complete an engineering project based upon the knowledge they have gained during BE/BS studies.
SCHEME OF STUDIES FOR ME/MS
Leading to PhD
AEROSPACE ENGINEERING

Minimum Credits Hours = 30
Essential Credit Hours = 21
Elective Credit Hours * = 09

* One of the electives should preferably be from Mathematics

DETAIL OF COURSES FOR ME/MS
Leading to PhD
AEROSPACE ENGINEERING

Title of the course: **Advanced Aerodynamics-I: Incompressible Flows**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
This graduate level course is first in the sequence of two advanced aerodynamics courses. The main focus of this course is on incompressible flows. Incompressible flows form a major part of aerodynamics and their analysis is broadly classified under “inviscid” and “viscous” flows. In viscous incompressible flows, further subdivisions are made on the basis of flow Reynolds number (Re) i.e. Laminar boundary layer (High Re), Stokes flow (low Re) and turbulent flow (Very high Re). The basic governing equations of fluid/aerodynamics i.e. Navier Stokes equations are introduced and their various analytical solution techniques are explained in detail. Two-dimensional incompressible and inviscid flows are solved using complex analysis treatment.

**Recommended Books:**

Title of the course: **Advanced Aerodynamics-II: Compressible Flows**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
This graduate level course is second in the sequence of two advanced aerodynamics courses. The main focus of this course is on compressible flow. Compressible flows form a major part of aerodynamics and their analysis is broadly classified under “inviscid” and “viscous” flows. Inviscid compressible flows include analysis of properties across shocks/expansion waves, variable area flows, linearized 2-D flow, part of hypersonic flow and unsteady wave motion. Viscous compressible flows involve solution of the complete system of governing equations including Navier-Stokes equations. Various examples of viscous compressible flow are illustrated.

**Recommended Books:**
Title of the Course: **Computational Fluid Dynamics-1**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
This is the first course in Computational Fluid Dynamics (CFD). This includes introduction to finite difference and finite volume methods used in modern engineering. Basic concepts of discretization, consistency and stability are also introduced. Applications of numerical methods to selected model partial differential equations are carried out

**Recommended Books:**

Title of the Course: **Advanced Heat Transfer**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
This graduate level course in heat transfer is designed to cover material beyond the undergraduate level. Different modes of heat transfer, i.e. Conduction, Convection and Radiation are broadly discussed. The main focus of this course is on Conduction and Convection with some introductory material on Radiation towards the end of the course. In Conduction 2-D steady and 1-D unsteady problems are introduced and their solution methods discussed. In Convection the equations of motion, energy and mass conservation are reviewed and problems involving forced and free convection are discussed with reference to various flow regimes

**Recommended Books:**
- *Heat Conduction* by Ozisik
- *Convective Heat Transfer 2nd Ed,* by Burmeister

Title of the Course: **Viscous Flow**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Laminar boundary-layer theory, three-dimensional and compressible boundary layers, Laminar-flow instability theory, transition, Introduction to the mechanics of turbulence, turbulent free shear flows and boundary layers, Computational and general solution methods, Stability of laminar flows, transition and turbulent flow.
**Recommended Books:**

**Title of the Course:** **Turbulent Fluid Flow**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Description of turbulent flow, Flow equations, vorticity dynamics, Reynolds-averaged equations, engineering turbulence models, Theory of homogeneous turbulence, spectral dynamics, Shear flow turbulence, mean and fluctuating structure of free and wall-bounded turbulent flows

**Recommended Books**

- *Introduction to turbulence* by Paul. A. Libby, 1996, Taylor and Francis

**Title of the Course:** **Theory of Elasticity**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
This is the first course in Structures, which in its broad aspect deals with the study of elastic bodies. When the elementary methods of strength of materials are inadequate to furnish satisfactory information regarding stress distribution in engineering structures, then a resort is made to the more powerful methods of theory of elasticity. Basic equations of the theory of elasticity in different co-ordinate system, solution to plane stress and plane strain problems, Fourier transformation method and St. Venant's principle is also introduced in the course. Solution to plates of various profiles and end conditions along with the most commonly used numerical energy methods are explained to strengthen the concepts of student to undertake the advanced courses in structures in the future semesters.
Recommended Books:
- Elasticity, Theory Application and Numerics by Martin H. Sadd, 2005, Elsevier

Title of the Course: **Advanced Theory of Vibrations**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
The purpose of this course is to cover comprehensive fundamental principles of vibration theory. It begins with an introduction to some basic concepts, discussion about spring, mass and damper elements, and introduction to harmonic motion and its analysis. The course then covers Free and Forced vibration of single degree of freedom (SDOF) system, damped and undamped system. After thoroughly covering SDOF system two and multi-degrees of freedom system are covered. Special additional topics are covered at the end of the course.

Recommended Books:
- *Mechanical Vibrations* by Singiresu S Rao, 3rd Ed, Addison-Wesley, Massachusetts, 2003

Title of the Course: **Finite Element Methods - I**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
The course covers Finite Element Method as applied to one & two-dimensional problems of structures, heat transfer & fluid flow. One-dimensional and two-dimensional, static & dynamic problems are solved by using FEM.

Recommended Books:
- Finite element procedures by K. A. J. Bathe, 1982
Title of the Course: **Mechanics of Composite Structures**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Composite material and their constituents, Unidirectional composites behaviour of laminated composite plates under various loading conditions, classical lamination theory, effective stiffness properties of composites, Constitutive description of laminated plates, Laminated plate theory, Edge effects in laminates, Nonlinear theory of generally laminated plates, Governing equations in the Von Karman sense, Laminated plates with moderately large deflections, Post buckling and nonlinear vibration of laminated plates, Failure theories and experimental results for laminates.

**Recommended Books:**
- *Mechanics of Composite Materials by Agarwal*
- *Composite Materials by Robert Jones*

Title of the Course: **Mechanical Behaviour of Materials**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**

**Recommended Books:**
- *Mechanical Behaviour of Materials by R. K. Dowling*

Title of the Course: **Design and Analysis of Aerospace Structures**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Structural design requirements for aerospace applications, Structural design of launch vehicle, aircraft and spacecraft. Analysis of thin walled structures under bending torsion and shear. Buckling of thin plates, columns, shear panels, compression panels and thin walled circular and conical cylinders. Stresses in flat and curved plates, stresses in rotating sections, Composite materials for aerospace applications.
**Recommended Books:**
- Aircraft Structures by Peery and Azar, 2nd Edition
- Theory and Analysis of Flight Structures by Robert M Rivello
- Aircraft Structures for Engineering Students by T H G Megson

**Title of the Course:** Design and Analysis of Aerospace Structures

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Structural design requirements for aerospace applications, Structural design of launch vehicle, aircraft and spacecraft. Analysis of thin walled structures under bending torsion and shear. Buckling of thin plates, columns, shear panels, compression panels and thin walled circular and conical cylinders. Stresses in flat and curved plates, stresses in rotating sections, Composite materials for aerospace applications.

**Recommended Books:**
- Aircraft Structures by Peery and Azar, 2nd Edition
- Theory and Analysis of Flight Structures by Robert M Rivello
- Aircraft Structures for Engineering Students by T H G Megson

**Title of the Course:** Advanced Heat Transfer

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
This graduate level course in heat transfer is designed to cover material beyond the undergraduate level. Different modes of heat transfer, i.e. Conduction, Convection and Radiation are broadly discussed. The main focus of this course is on Conduction and Convection with some introductory material on Radiation towards the end of the course. In Conduction 2-D steady and 1-D unsteady problems are introduced and their solution methods discussed. In Convection the equations of motion, energy and mass conservation are reviewed and problems involving forced and free convection are discussed with reference to various flow regimes.
Recommended Books:
- *Heat Conduction* by Ozisik
- *Convective Heat Transfer 2nd Ed*, by Burmeister

Title of the Course: **Advanced Combustion**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**

**Recommended Books:**
- *Principles of combustion* by Kenneth K. Kuo

Title of the Course: **Rocket Propulsion**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Analysis of liquid and solid propellant rocket power plants, propellant thermo-chemistry, heat transfer, system considerations. Low-thrust rockets, multi-stage rockets, trajectories in powered flight, electric propulsion, Space Propulsion and Power Systems, Analysis and performance of chemical and nuclear rockets, electric propulsion systems, Introduction to solar, chemical, thermoelectric, and nuclear power sources, Aero thermo-chemistry of Advanced Propulsion Systems, Physics and chemistry needed to analyze high performance rocket propulsion systems including reacting high temperature radiating gas and plasma flows.

**Recommended Books:**
Title of the Course: **Advanced Aerothermodynamics**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Aerothermodynamics of Aerospace vehicles, (missiles, space planes, air-breathers), flight dynamics (trajectory, range, stability), aero thermodynamics (fluid dynamics, thermodynamics, aerodynamics, heating), and propulsion systems (scramjets, combined cycles).

**Recommended Books:**
- ‘Gas Turbine Theory’ by H Cohan, G F C Rogers & H I H Saravanamuttoo, John Wiely & Sons Inc.

Title of the Course: **Turbomachinery**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
This course includes the theories of cascades, performance analysis of axial and radial flow compressor, pumps and turbines at design and off-design conditions.

**Recommended Books:**
- Fluid Mechanics, Thermodynamics of Turbomachinery by S L Dixon, Pergamon Press, 1966

Title of the Course: **Advanced Aerospace Propulsion**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
This course includes the theory of rocket propulsion, flight dynamics of rocket, solid rocket, liquid rocket, heat transfer in rocket motor, and component design.

**Recommended Books:**
Title of the Course: Modern Feedback Control Theory

Credit Hours: 3-0

Prerequisites: Nil

Course Outline
Applications of modern feedback control theory to flight control, Controller design based on optimal control techniques. Nonlinear system theory applications, typical aerospace control methods such as model following, load alleviation, and flutter suppression, recent advances in aerospace vehicle control.

Recommended Books:
Modern control system by Richard Dorf, Robert Bishop 11th edition, Pearson education

Title of the Course: Guidance and Navigation of Aerospace Vehicles

Credit Hours: 3-0

Prerequisites: Nil

Course Outline

Recommended Books:
Modeling and Simulation of Aerospace Vehicle Dynamics by Peter H. Zipfel, 2001, AIAA
Schwarz KP and M Wei 2000. INS/GPS Integration for Geodetic Applications

Title of the Course: Aerospace Vehicle Dynamics and Control

Credit Hours: 3-0

Prerequisites: Nil

Course Outline
Six degree of freedom motion of aerospace vehicle, ascent and re-entry of launch vehicle and space craft, attitude control of spacecraft, transfer of orbit, types of spacecraft orbits, Methods of Coordinate Transformation,
Equation of Motion for Flight over Flat Earth, Equation of Motion for Flight over Spherical Earth, Equation of Motion for Flight over Ellipsoidal Earth, Flight Dynamics of launch vehicle and Spacecraft.

**Recommended Books:**

- Space vehicle dynamics and control by Bong Wie, 2nd edition, 2008, AIAA

**Title of the Course:** **Optimal Control**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
The optimal control problem, Variational approach, Pontryagin’s principle, Hamilton-Jacobi equation, Dynamic programming, Time-optimal, minimum fuel, minimum energy control systems, the regulator problem, Structures and properties of optimal controls.

**Recommended Books:**

- Optimal control with engineering applications by Gearing Hans P. 2007, Springer

**Title of the Course:** **Design of Aerospace Vehicles**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
System engineering, Mission analysis and design, Trajectories, determination of main design parameters, configuration and structural design, mass analysis, performance analysis

**Recommended Books:**

- Exergy analysis and design optimization of aerospace vehicle systems by Jose A Cambereos, David J. Moorhouse, 2011, AIAA

**Title of the Course:** **Inertial & Integrated Navigation System**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Principles of inertial navigation and its integration with GPS; coordinate frames, modelling linear motion and rotational motion, mechanization of inertial navigation sensor measurements, space state representation of system errors and linear state equations.
**Recommended Books:**

**Title of the Course:** **Advanced Flight Dynamics**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
The course includes dynamics and control of aircraft, Linear systems theory, state equations, transfer functions, stability, time and frequency response, Aircraft longitudinal and lateral flight dynamics

**Recommended Books:**
- Flight dynamics and principles by M. V. Cook, 2007, Butterworth Heinemann

**Title of the Course:** **Multi-disciplinary Optimization for Aerospace Vehicle Design**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**
Applications of unconstrained and constrained parameter optimization, dynamic programming, and optimal control theory to problems in aerodynamics, aerospace structures, flight dynamics and control, and aerospace design, numerical methods of optimization.

**Recommended Books:**
- Applied optimization with MATLAB programming by P. Venkataraman, 2nd edition
- Compressible Fluid Dynamics (Contents given above)
- Advanced Propulsion Systems (Contents given above)

**Title of the Course:** **Advanced Engineering Mathematics**

**Credit Hours:** 3-0

**Prerequisites:** Nil

**Course Outline:**

**Recommended Books:**
- Introductory Linear Algebra with Applications 6th Ed, by Bernard
Kolman, Printice Hall, USA, 1997

Partial Differential Equations for Scientists and Engineers, by Tunc Myint-U & Lokenath Debnath, 3rd Ed, PTR Prentice Hall NJ

Advanced Engineering Mathematics by Erwin Kreysig, 8th Ed, John Wiley Singapore, 1999

Calculus of Variations by Robert Weinstock, McGraw Hill, 1952

List of MS/ME Electives is placed as Annex “F”
RECOMMENDATIONS

The NCRC discussed different aspects of the curriculum of Aerospace Engineering at length and agreed upon the recommendations given hereunder:

1. The core courses be made compulsory in all Universities of Pakistan and a set of electives may be chosen to fulfil the complete curriculum requirement. Universities may introduce electives to meet their specific requirements on the recommendations of their Boards of Studies. Similarly, the recommended books are to serve as a guideline only. Institutions may choose latest editions of the recommended books for use as text or reference.

2. At most of the universities/colleges, laboratories need improvements. The education in the field of engineering, particularly in Aerospace, cannot be imparted without lab-work and hands-on training. Special attention and additional funds may be provided to equip the laboratories. Furthermore, in core areas, laboratory work is deemed absolutely essential.

3. Trained and qualified manpower may be inducted on regular basis to overcome faculty shortage.

4. Special incentives may be devised for good teachers and students for their encouragement.

5. Access to the HEC digital library and PERN is recommended for provisioning to the universities.

6. Use and application of simulation software tools may be introduced to students for the research/development work at appropriate levels.

7. For Mini and Final Year Projects, Laboratories shall be appropriately equipped with components, devices and equipments. Moreover, students may be encouraged to validate the work through experimentation subsequent to simulation.

8. Final year projects should involve design, analysis and practical work. The assessment of the projects shall include an open-house formal presentation by the students and efforts may also be made to invite representatives from the local industry. In case of aerospace industry related projects, co-supervision of industrial experts and use of facilities be promoted.

9. The Committee is fully cognizant of the need for very strong interaction amongst the universities on academic matters.
Therefore, all universities should disseminate any changes in their curricula to others as well.

10. All engineering institutions should encourage internship training, spanning 4 to 6 weeks for their students in the local industry through liaison offices. The Committee strongly opines that in order to ensure participation of the industry, a legal framework needs to be evolved at the Provincial and Federal Government levels.

11. The universities shall have their own faculty development programme, through attendance in short courses; seminars; workshops and visits to industries.

12. The institutions should now launch PhD programme, if the requirements set by the HEC are fulfilled. Project work support for this programme (simulations/testing/ subject-specialist's/experts) could be arranged through industrial liaison, imparting talks/short lectures and seminars, which could be even beneficial for BE/BS and ME/ MS levels.
Annex “A”

COMPULSORY COURSES IN ENGLISH FOR BE/BSc IN ENGINEERING DISCIPLINE

Semester-I

Functional English

Objectives: To enhance language skills and develop critical thinking

Course Contents

Basics of Grammar
Parts of speech and use of articles
Sentence structure, Active and passive voice
Practice in unified sentence
Analysis of phrase, clause and sentence structure
Transitive and intransitive verbs
Punctuation and spelling

Comprehension
Answers to questions on a given text

Discussion
General topics and every day conversation (topics for discussion to be at the discretion of the teacher keeping in view the level of students)

Listening
To be improved by showing documentaries/films carefully selected by subject teachers)

Translation skills
Urdu to English

Paragraph writing
Topics to be chosen at the discretion of the teacher

Presentation skills
Introduction

Note: Extensive reading is required for vocabulary building

Recommended Books:

1. Functional English
   a) Grammar

b) Writing

c) Reading/Comprehension

d) Speaking

Semester II

Communication Skills

Objectives:
To enable the students to meet their real life communication needs

Course Contents:

Paragraph writing
Practice in writing a good, unified and coherent paragraph

Essay writing
Introduction

CV and job application

Translation skills
Urdu to English

Study skills
Skimming and scanning, intensive and extensive, and speed reading, summary and précis writing and comprehension

Academic skills
Letter / memo writing and minutes of the meeting, use of library and internet recourses

Presentation skills
Personality development (emphasis on content, style and pronunciation)

Note: documentaries to be shown for discussion and review
Recommended Books:
Communication Skills
a) Grammar

b) Writing

c) Reading
2. Reading and Study Skills by John Langan
3. Study Skills by Riachard Yorky.

Semester III
Technical Writing and Presentation Skills

Objectives:
To enable the students to write a research paper / technical report in a succinct manner according to a specified format.

Course Contents:

Presentation skills

Essay writing
Descriptive, narrative, discursive, argumentative

Academic writing
How to write a proposal for research paper/term paper

How to write a research paper/term paper (emphasis on style, content, language, form, clarity, consistency)

Technical Report writing

Note: Extensive reading is required for vocabulary building
Recommended Books:
Technical Writing and Presentation Skills

a) Essay Writing and Academic Writing
   19 435407 3 (particularly suitable for discursive,
   descriptive, argumentative and report writing).

3. Patterns of College Writing (4th edition) by Laurie G.

b) Presentation Skills

c) Reading
   The Mercury Reader. A Custom Publication. Compiled by
   northern Illinois University. General Editors: Janice Neulib;
   Kathleen Shine Cain; Stephen Ruffus and Maurice Scharton.
   (A reader which will give students exposure to the best of
   twentieth century literature, without taxing the taste of
   engineering students).

UNIT NO.1: INTRODUCTION TO QUR'ANIC STUDIES
1) Basic Concepts of Quran
2) History of Quran
3) Uloom-ul-Quran

UNIT NO.2: STUDY OF SELECTED TEXT OF HOLLY QURAN
1) Verses of Surah Al-Baqra Related to Faith (Verse No. 284-286)
2) Verses of Surah Al-Hujrat Related to Adab Al-Nabi (Verse No. 1-18)
3) Verses of Surah Al-Mumanoon Related to Characteristics of faithful (Verse No. 1-11)
4) Verses of Surah al-Furqan Related to Social Ethics (Verse No. 63-77)
5) Verses of Surah Al-Inam Related to Ihkam (Verse No. 152-154)

UNIT NO.3: STUDY OF SELECTED TEXT OF HOLLY QURAN
1) Verses of Surah Al-Ihzab Related to Adab al-Nabi (Verse No. 6,21,40,56,57,58.)
2) Verses of Surah Al-Hashar (18,19,20) Related to thinking, Day of Judgment
3) Verses of Surah Al-Saf Related to Tafakar, Tadabar (Verse No. 1,14)
UNIT NO.4: SEERAT OF HOLY PROPHET (S.A.W) I

1) Life of Muhammad Bin Abdullah (Before Prophet Hood)
2) Life of Holy Prophet (S.A.W) in Makkah
3) Important Lessons Derived from the life of Holy Prophet in Makkah

UNIT NO.5: SEERAT OF HOLY PROPHET (S.A.W) II

1) Life of Holy Prophet (S.A.W) in Madina
2) Important Events of Life Holy Prophet in Madina
3) Important Lessons Derived from the life of Holy Prophet in Madina

UNIT NO.6: INTRODUCTION TO SUNNAH

1) Basic Concepts of Hadith
2) History of Hadith
3) Kinds of Hadith
4) Ulum-ul-Hadith
5) Sunnah & Hadith
6) Legal Position of Sunnah

UNIT NO.7: SELECTED STUDY FROM TEXT OF HADITH

UNIT NO.8: INTRODUCTION TO ISLAMIC LAW & JURISPRUDENCE

1) Basic Concepts of Islamic Law & Jurisprudence
2) History & Importance of Islamic Law & Jurisprudence
3) Sources of Islamic Law & Jurisprudence
4) Nature of Differences in Islamic Law
5) Islam and Sectarianism

UNIT NO.9: ISLAMIC CULTURE & CIVILIZATION

1) Basic Concepts of Islamic Culture & Civilization
2) Historical Development of Islamic Culture & Civilization
3) Characteristics of Islamic Culture & Civilization
4) Islamic Culture & Civilization and Contemporary Issues

UNIT NO.10: ISLAM & SCIENCE

1) Basic Concepts of Islam & Science
2) Contributions of Muslims in the Development of Science
3) Quran & Science

UNIT NO.11: ISLAMIC ECONOMIC SYSTEM

1) Basic Concepts of Islamic Economic System
2) Means of Distribution of wealth in Islamic Economics
3) Islamic Concept of Riba
4) Islamic Ways of Trade & Commerce
UNIT NO.12: POLITICAL SYSTEM OF ISLAM
1) Basic Concepts of Islamic Political System
2) Islamic Concept of Sovereignty
3) Basic Institutions of Govt. in Islam

UNIT NO.13: ISLAMIC HISTORY
1) PERIOD OF KHALIFA-E-RASHIDA
2) PERIOD OF UMMAYYADS
3) PERIOD OF ABBASIDS

UNIT NO.14: SOCIAL SYSTEM OF ISLAM
1) BASIC CONCEPTS OF SOCIAL SYSTEM OF ISLAM
2) ELEMENTS OF FAMILY
3) ETHICAL VALUES OF ISLAM

Pakistan Studies (Compulsory)

(As Compulsory Subject for Degree Students)

Introduction/Objectives:

The course has been designed as a compulsory subject for the students studying for Bachelor’s degree, general or professional. The course is of 2 credit hours carrying 100 marks (recommended). The teaching work is comprised of three dimensions: Historical Perspective (20%); Government and Politics (40%); and Contemporary Pakistan (40%).

The course framework is issue-oriented. It has many dimensions, the historical and ideological background of Pakistan, the process of governance and national development as well as the issues arising in the modern, age and posing challenges to Pakistan. The course has been designed with a vision that Pakistan Studies should open a window to future.

Course Outline

1. Historical Perspective
   b. Factors leading to Muslim separatism
   c. People and Land
      i. Indus Civilization
      ii. Muslim advent
      iii. Location and Geo-Physical features.

2. Government and Politics in Pakistan

   Political and constitutional phases:
   a. 1947-58
   b. 1958-71
   c. 1971-77
   d. 1977-88
   e. 1988-99
   f. 1999 onward

3. Contemporary Pakistan
   a. Economic institutions and issues
   b. Society and social structure
c. Ethnicity

d. Foreign policy of Pakistan and challenges

e. Futuristic outlook of Pakistan

**Recommended Books:**

Objectives: The main objective of this course is to apprise potential engineers about social factors that contribute towards enhancing their professional performance for the good of society and the country. This course is culture specific and has to be taught within the context of local and national socio-economic environment. The engineers are expected to supervise several people in different capacities and their understanding about human behaviour is critical for their optimum performance. Modification of human behaviour or getting work done from subordinates and seniors remain a major challenge for all the professional engineers. This course will enhance understanding about the determinants of human behaviour, which ultimately will result in improved individual efficiency.

1. Introduction to Sociology
   1.1 What is sociology?
   1.2 Nature, Scope, and Importance of Sociology
   1.3 Social Interactions
   1.4 Social Groups
   1.5 Social Institutions

2. Culture and Related Concepts
   2.1 Definition of Culture
   2.2 Types of Culture
   2.3 Elements of Culture
   2.4 Role of Culture in Organization
   2.5 Socialization and Personality

3. Interpersonal Relations
   3.1 Interpersonal Behaviour
   3.2 Formation of Personal Attitudes
   3.3 Language and Communication
   3.4 Motivations and Emotions
   3.5 Public Opinion

4. Social Stratification
   4.1 Factors of Social Stratification
   4.2 Caste and class
   4.3 Power, Prestige, and Authority
   4.4 Social Mobility
   4.5 Migration

5. Human Ecology
   5.1 Ecological Processes
   5.2 Ecosystem and energy
   5.3 Ecosystem and Physical Environment
   5.4 Solid Waste Disposal
   5.5 Pollution
6. Population Dynamics
   6.1 World Population Growth and Distribution
   6.2 Population Dynamics in Pakistan
   6.3 Causes and Consequences of Urbanization
   6.4 Population Policy in Pakistan
   6.5 Population and Development

7. Community Development
   7.1 Meaning, Scope, and Subject Matter of Community Development
   7.2 Processes of Community Development
   7.3 Community Development Programs in Pakistan
   7.4 Community Organization and Related Services
   7.5 Cooperation and Conflict in Community Development

8. Deviance and Crime
   8.1 Crime as a Social and Cultural Phenomenon
   8.2 Crime and Social Organization
   8.3 Organized Crime
   8.4 Culture Based Crime
   8.5 Economics of Crime

9. Sociology of Change and Development
   9.1 What is Social Change and Development?
   9.2 Dynamics of Social Change
   9.3 Role of NGOs in Development
   9.4 World System and Development
   9.5 Gender and Development

Recommended Readings

SOCIAL ANTHROPOLOGY
(For Engineers)

Objectives:
The students are expected to learn anthropological skills for application by professional engineers and other related practitioners. Societal growth needs are to be understood within our own cultural environment. Such a body of applied knowledge will result in improving the professional performance of would-be engineers. As culture and society play an important role towards all human activities, this course will help students relate technical skills to the societal needs and requirements.

I Introduction
1. Anthropology and Social Anthropology
2. Fields of Anthropology
3. Anthropological Research Methods
4. Social Anthropology and other Social Sciences
5. Significance of Social Anthropology

II Culture
1. Definition, Properties and Taxoromy
2. Evolution of Growth and Culture
3. Evolution of Man: Religious and Modern Perspectives
4. Evolution of Culture
5. Culture and Personality

III Evolution and Growth of Culture
1. Evolution of Man
2. Schools of Thought in Cultural Anthropology
3. Acculturation
4. Enculturation
5. Ethnocentrism and Xenocentrism

IV Language and Culture
1. Communication
2. Structural Linguistics
3. Historical Linguistics
4. Relationship between Language and Culture
5. Ethnography
V  Economic System
   1. Global Economic System
   2. The Allocation of Resources
   3. The Conversion of Resources
   4. The Distribution of Goods and Services
   5. Poverty and Inequality

VII  Marriage and Family
   1. Marriage and Mate Selection
   2. The Family: Types and Functions
   3. Kinship System
   4. Structure and Function of Family
   5. Gender Relations

VIII  Political Organization
   1. Political Sociology
   2. Origin of Political Organization and Organizational System
   3. Types of Political Organizations
   4. Power Politics and Factionalism in Pakistan
   5. Resolution of Conflict

IX  Religion and Magic
   1. The Universality of Religion
   2. Comparative Religions
   3. Religion and Society
   4. Religious Beliefs and Practices
   5. Witchcraft and Sorcery

XI  Culture Change
   1. Forms of Art
   2. Expressive Culture
   3. Process of Cultural Change
   4. Cultural Change in the Modern World
   5. Cultural Change in Pakistani society

Recommended Books:
Psychology courses for BS/BE in Engineering Programmes

Course-I **Understanding Psychology and Human Behaviour**  3 Cr. hrs
- What is Psychology?
- Nature, Scope and Application with Special Reference to Pakistan
- Different Schools of Psychology
- Methods of Psychology
- Learning
- Intelligence and Artificial Intelligence
- Personality and its Assessment
- Understanding Maladjustive Behaviour
- Positive Emotional States and Processes
- Stress Management and Anger Management

**Recommended Books:**

Course II  Professional Psychology  3 cr hrs
- Introduction to Professional Psychology
- Psychological Testing
- Educational Psychology
- Industrial/Organizational Psychology
- Social Psychology
- Health Psychology
- Clinical Psychology
- Positive Psychology
- Legal, Ethical, and Professional Issues.

Recommended Books:
PROFESSIONAL PRACTICE

Course Description:

Prerequisite: None

This course introduces contemporary and controversial ethical issues facing the business community. Topics include moral reasoning, moral dilemmas, law and morality, equity, justice and fairness, ethical standards, and moral development. Upon completion, students should be able to demonstrate an understanding of their moral responsibilities and obligations as members of the workforce and society.

Course Objectives:

At the completion of the course requirements, the student will be able to:
   a. Define business ethics
   b. Describe the evolution of business ethics
   c. Describe major ethical perspectives
   d. Understand and apply an ethical decision-making framework
   e. Understand social responsibility from several dimensions
   f. Understand how the organization influences ethical decision-making
   g. Examine how significant others influence ethical decision-making
   h. Develop an effective ethics programme.
   i. Understand international business ethics.

Course Outline:

Ethical issues in Business: Foundation of Ethical Conflict, Classifications of Ethical Issues, Ethical Issues Related to Participants and Functional Areas of Business, Recognizing an Ethical Issue.

Applying Moral Philosophies to Business Ethics: Moral Philosophy Defined, Moral Philosophy Perspectives.

How the Organization Influences Ethical Decision Making: Organizational Structure and Business Ethics, the role of Corporate Culture in Ethical Decision-Making, Group Dimensions of Organizational
Structure and Culture, Implications of Organizational Relationships for Ethical Decisions.

The Role of Opportunity and Conflict: Opportunity, Conflict.

International Business Ethics: Ethical Perceptions and International Business, Culture As a Factor in Business, Adapting Ethical Systems to a Global Framework: Cultural Relativism, the Multinational Corporation, A universal Set of Ethics, Ethical Issues Around the Globe.

Text Books:

ORGANIZATIONAL BEHAVIOUR 3 Cr Hrs

- Introduction to Organizational Behaviour
  - Organizational Disciplines and topics
  - Psychological Perspective
  - Social-Psychological Perspectives

- Structure and Control in Organization
  - Introduction
  - Bureaucracy
  - Managerial Work
  - Contingency theory
  - Organizational Design

- Individual and Work Learning
  - Learning Theories
  - Learning and Work

- Stress
  - Types of Stress and Work
  - Occupational Stress Management

- Individual Differences
  - Personality and its factors
  - Personality dimensions and social learning
  - Intelligence
Motivation and Job Satisfaction
  o Needs at Work
  o Theories of Motivation and job satisfaction
  o Correlates of Job satisfaction
  o Correlates of Job satisfaction

Group and Work
  o Social Interaction
  o Dramaturgy and impression Management
  o Social Skill

Group and Inter group Behaviour
  o Group Structure & Norms
  o Group Processes
  o How throne Studies

Leadership
  o Leadership as an attribute
  o Leadership Style

Patterns of Work
  o Work-the classical approach
  o Marx, Weber, & The critique of labour
  o Foucault & Disciplinary Power

Conflict and Consent in Work
  o The labour Process debate
  o Work place control and resistance
  o Industrial conflict and industrial relations

Organizational culture
  o Organizational culture and strategic management
  o Exploring organizational culture
  o Evaluating concept of culture

Recommended Books:

INTRODUCTION TO SOCIOLOGY

- The Nature of Sociology
  - The study of social life
  - Exploring the global village
  - Sociology as a science
  - The Sociological imagination
  - The development of Sociology
  - Pioneers of Sociology
  - Nature, scope and subject matter of Sociology
  - Brief historical development of Sociology
  - Society and community
  - Relationship with other social sciences
  - Social Interaction Processes

- Social groups
  - Definition and functions
  - Types of social groups

- Social institutions
  - Definition
  - Structure and function of social institutions
  - Inter-relationships among various social institutions

- Culture and related concepts
  - Definition and aspects of culture
  - Elements of culture
  - Organization of culture
  - Other concepts, cultural relativism, sub cultures, ethnocentrism, culture lag

- Socialization and personality
  - Role and status
  - Socialization
  - Culture and personality

- Deviance and social control
  - Definition and types of deviance
  - Juvenile delinquency
  - Formal and information methods of social control

- Social stratification
  - Approach to study social stratification
  - Caste class and race as basics of social stratification

- Major perspectives in Sociology
  - Functionalist perspective
  - Conflict perspective
  - Interactionistic perspective
• Social Control and deviance
  o Agencies of social control

• Social stratification
  o Determinants of social stratification
  o Social mobility, types and definition
  o Dynamics of social mobility

• Concept of social movement
  o Theories of social movement
  o Social and cultural change

• Social and cultural change
  o Definition of social change
  o Dynamics of social change
  o Impact of globalization on society and culture
  o Resistance to change

• Collective behaviour
  o Definition
  o Characteristics
  o Causes
  o Types
  o Social movements
  o Mob and crowd behaviour

Recommended Books:

CRITICAL THINKING 3 Cr Hrs

• The Power of Critical Thinking
  o Claims and Reasons
  o Reasons and Arguments
  o Arguments in the Rough

• The Environment of Critical Thinking
  o Perils of Haunted Mind
  o Self and the Power of the Group
  o Subjective and Social Relativism
- Skepticism

- Making Sense of Arguments
  - Arguments Basics
  - Patterns
  - Diagramming Arguments
  - Assessing Long Arguments

- Reasons for Belief and Doubt
  - Conflict Experts and Evidence
  - Personal Experience
  - Fooling Ourselves
  - Claims in the News

- Faulty Reasoning
  - Irrelevant Premises
  - Genetic Fallacy, Composition, Division
  - Appeal to the Person, Equivocation, Appeal to Popularity
  - Appeal to Tradition, Appeal to Ignorance, Appeal to Emotion
  - Red Herring, Straw Man

- Unacceptable Premises
  - Begging the Question, False Dilemma
  - Slippery Slope, Hasty Generalization
  - Faulty Analogy

- Deductive Reasoning: Propositional Logic
  - Connectives and Truth Values
  - Conjunction, Disjunction, Negation
  - Conditional, Checking for Validity
  - Simple Arguments, Tricky Arguments
  - Streamlined Evaluation

- Deductive Reasoning: Categorical Logic
  - Statements and Classes
  - Translations and Standard Form
  - Terms, Quantifiers
  - Diagramming Categorical Statements
  - Sizing up Categorical Syllogisms

- Inductive Reasons
  - Enumerative Induction
  - Sample Size, Representativeness, Opinion Polls
  - Analogical Induction
  - Casual Arguments, Testing for Causes
  - Casual Confusions

- Inference to the Best Explanation
  - Explanations and Inference
- Theories and Consistency
- Theories and Criteria
- Testability, Fruitfulness, Scope, Simplicity
- Conservatism

- Judging Scientific Theories
  - Science and Not Science
  - The Scientific method, Testing Scientific Theories
  - Judging Scientific Theories
  - Copernicus versus Ptolemy, Evolution Versus Creationism
  - Science and Weird Theories
  - Making Weird Mistakes
  - Leaping to the Weirdest Theory, Mixing What Seems with What is
  - Misunderstanding the Possibilities
  - Judging Weird Theories
  - Crop Circles, Talking with the Dead

**RECOMMENDED BOOKS:**

**INTRODUCTION TO PHILOSOPHY**  
3 Cr Hrs

- Definition and Nature of Philosophy
- Theory of Knowledge
  - Opinion and Knowledge
  - Plato, the Republic Selection
  - Knowledge through Reason
  - Descartes Meditation on First Philosophy
  - Knowledge through Experience
  - Hume an Inquiry concerning Human Understanding (Selection)
  - Experience Structured by the Mind
  - Kant Critique of Pure Reason (Selection)
  - Knowing and Doing
  - James Pragmatism (Selection)
  - Knowledge and Emotion
  - Jaggar Love and Knowledge (Selection)

- Philosophy of Religion
  - Proving that Existence of God
  - Anselm, Aquinas, Paley, Dawkins (Selection)
  - Justifying Religious Beliefs
  - Pascal Pensees (Selection)
• Metaphysics
  o Idealism and Materialism
  o Berkeley Three Dialogues Between Hylas and Pholous (Selection)
  o Armstrong Naturalism, Materialism and First Philosophy (Selection)
  o The Mid-Body Problem
  o Descartes Meditations on First Philosophy (Selection)
  o O’Hear Introduction to the Philosophy of Science (Selection)
  o Dennett The Origins of Selves (Complete)
  o Pali Canon (Selection)
  o Penelhum Religion and Rationality (Selection)

• Freedom to Choose
  o Libertarianism
  o James The Dilemma of Determinism (Selection)
  o Taylor Metaphysics (Selection)
  o Determinism
  o Hospers Meaning and Free Will (Selection)
  o Skinner Walden Two (Selection)
  o Compatibilism
  o Stace Religion and the Modern Mind (Selection)
  o Radhakrishnan Indian Philosophy (Selection)

• Ethics
  o Fulfilling Human Nature
  o Aristotle Nicomachean Ethics (selection)
  o Loving God
  o Augustine The Morals of the Catholic Church and the City of God (Selection)
  o Following Natural Law
  o Aquinas Summa Theologiae (Selection)
  o Doing One’s Duty
  o Kant Fundamental Principles of the Metaphysics of Morals (Selection)
  o Maximizing Utility
  o Mill Utilitarianism (Selection)
  o Turning Values of Upside Down
  o Nietzsche Human, All too Human and Beyond Good and Evil (Selection)
  o Creating Ourselves
  o Sartre Existentialism is a Humanism (Selection)
  o Hearing the Feminine Voice
- Gilligan In a Different Voice (Selection)
- Baier What do Women Want in a Moral Theory (Selection)

- Political and Social Philosophy
  - The State as Natural
  - Plato the Republic (Selection)
  - Aristotle Politics (Selection)
  - The State as a Social Contract
  - Hobbes Philosophical Rudiments Concerning Government and Society (Selection)
  - Locke the Second Treatise of Government (Selection)
  - Liberty of the Individual
  - Mill On Liberty (Selection)
  - Alienation in Capitalism
  - Marx Economic and Philosophic Manuscripts of 1844 (Selection)
  - Justice and Social Trust
  - Rawls A Theory of Justice (Selection)
  - Nozick Anarchy, State, and Utopia (Selection)
  - Held Rights and Goods (Selection)
  - Women in Society
  - Wollstonecraft A Vindication of the Rights of Women (Selection)
  - De Behaviour The Second Sex (Selection)
  - The Value of Philosophy
  - Russel The Problems of Philosophy (Selection)
  - Midgley Philosophical Plumbing (Selection)

**RECOMMENDED BOOKS:**

MANAGEMENT COURSES

ENTREPRENEURSHIP

Course Objective:

Entrepreneurship is an important component in the process of economic development. The purpose of this course is to analyse the theories of entrepreneurship and to go for case studies of successful entrepreneurs.

Course Contents:

Introduction: The concept of entrepreneurship, The economist view of entrepreneurship, The sociologist view, Behavioural approach, Entrepreneurship and Management

The Practice of Entrepreneurship: The process of entrepreneurship, Entrepreneurial Management, The entrepreneurial business, Entrepreneurship in service institutions, The new venture

Entrepreneurship and Innovation: The innovation concepts, Importance of innovation for entrepreneurship, Sources of innovative opportunities, The innovation process, Risks involved in innovation

Developing Entrepreneur: Entrepreneurial profile, Trait approach to understanding entrepreneurship, Factors influencing entrepreneurship, The environment, Socio cultural factors, Support systems

Entrepreneurship Organization: Team work, Networking organization, Motivation and compensation, Value system

Entrepreneurship and SMEs: Defining SMEs, Scope of SMEs, Entrepreneurial, managers of SME, Financial and marketing problems of SMEs

Entrepreneurial Marketing: Framework for developing entrepreneurial marketing, Devising entrepreneurial marketing plan, Entrepreneurial marketing strategies, Product quality and design

Entrepreneurship and Economic Development: Role of entrepreneur in the economic development generation of services, Employment creation and training, Ideas, knowledge and skill development, The Japanese experience

Case Studies of Successful Entrepreneurs

Text Books:

- Paul Burns and Jim Dew Hurst: Small Business and Entrepreneurship
- P.N. Singh: Entrepreneurship for Economic Growth
PRINCIPLES OF MANAGEMENT

Course Objectives:

This is a rudimentary course for the students of business administration. The focus of attention will be given to learning fundamental principles of management and of managing people and organization in a historical as well as contemporary world. Students are expected to develop analytical and conceptual framework of how people are managed in small, medium and large public and private national and international organizations.

Course Contents:

- Introduction, overview and scope of discipline
- The evolution and emergence of management thought
- Management functions
- Planning concepts, objectives, strategies and policies
- Decision making
- Organizing: departmentalization, line/staff authority, commitments and group decision making
- Staffing: principles of selection, performance, career planning
- Leading: Motivation, leadership, communication
- Controlling: the system and process and techniques of controlling
- Management and Society: future perspective

Text Books:

- Stephen P. Robins, Mary Coulter: Management
- H. Koontz Odonnel and H. Weihrich: Management
- McFarland: Management: Foundation and Practice

Title of the Course: Engineering Management  Cr Hrs: 3

Introduction to organization, planning and decision aids, project planning techniques, organization structure, human resource management, leadership, total quality management, project management techniques, managing information system, managing operation, PERT, CPM, tools.

Title of the Course: Total Quality Management

Fundamental principles; standards; techniques for quality analysis and improvements; statistical methods and SPC. Acceptance sampling, QFD, value engineering, cross-functional management and bench marking; ISO-9000 application, clauses and implementation issues
